

SPIDER SECURITY PRODUCTS

WHO WE ARE

We're a unique collaboration of physical security veterans, who have joined forces with ethical "red team" security professionals.

Together we share **two main objectives**:

1. To develop uniquely innovative security products that function at maximum levels of efficiency & anti-hacking resistance.
2. That we may improve, reinforce, and simplify the installation processes for our industry's field professionals.

WHY ARE WE DOING THIS

Too many security manufacturers continue to implement antiquated & outdated technologies into their current product offerings of today.

Consequentially – Physical Assets, Intellectual Property, and Public Safety are all placed at high risks due to vulnerabilities in:

- Access Control Systems reliant upon inventions [from the 1970's](#).
- Motion Sensor Detectors utilizing technologies [from year 1950](#).
- Door Contacts using Magnetic Reed Switches, [invented in 1936](#).

HOW OUR SOLUTIONS WILL BENEFIT ALL

We apply an "outside wanting in" perspective to security. With this mindset we are able to create revolutionary products that work!

- ✓ In today's vastly segmented security markets, SSP is one singular company focused on providing complete door security solutions.
- ✓ We place a concentrated emphasis among our products, into providing a "proven resistance" to modern hacking technologies.
- ✓ We'll support our installation professionals with innovative tools & resources, inducing maximum quality and top value for clients.
- ✓ We are in constant engagement with the "white hat" security communities, identifying & addressing newfound risks affecting physical security.

PHYSICAL SECURITY REDEFINED.
