

3 Main Problems with “Squeeze Magnets”

Problem #1: It’s an unaccounted/added cost.
(As they are commonly forgotten on Bids and BOM’s).
They do not come standard with most door contacts.

Problem #2: It adds to labor costs. Once the need is identified, the installer has to drive to a local supplier, (and hope that they have them in stock).

Problem #3: Once installed, the squeeze magnet offers no adjustment features, to accommodate for the inevitable, gravity-induced changes in door gaps.

These problems are solved with the

SPIDER DOOR CONTACT

Our innovative magnet design is included with every Spider Door Contact, and can accommodate virtually any type of door!
